

Mirzo — Brand Guidelines

Mirzo is a privacy-first AI notetaker. It records and summarises your meetings without a bot ever joining the call, and it keeps what it hears private. The brand should feel like the product: calm, discreet and trustworthy, never loud or techy.

The name

- **Written:** Mirzo in running text; lowercase "mirzo" only inside the logo.
- **Said:** MEER-zo.
- **Meaning:** in Uzbek and Persian tradition, the *mirzo* was the court scribe: the educated, trusted person who wrote everything down and kept confidences.
- **Tagline:** *AI notes without the bot.*
- **Short description:** *Mirzo quietly takes your meeting notes. No bot joins the call, and your conversations stay private.*
- **Watch out for Miro:** a large collaboration platform is one letter away. In ads, links and spoken intros, always show or spell the name clearly next to its web address.

Files in this folder

File	Use
<code>mirzo-logo.svg</code> / <code>.png</code>	Primary logo on parchment or white: website header, documents, light slides.
<code>mirzo-logo-reversed.svg</code> / <code>.png</code>	For ink backgrounds: dark hero sections, footer, dark slides. The seal turns parchment. Only place it on ink #1C2340 or darker.
<code>mirzo-wordmark.svg</code> / <code>.png</code>	The name alone, where it is already clearly Mirzo: app header, email signature, merchandise, elegant print.
<code>mirzo-wordmark-reversed.svg</code> / <code>.png</code>	Wordmark for ink backgrounds.
<code>mirzo-mark.svg</code> / <code>.png</code>	The seal alone on light backgrounds: favicon, loaders, watermarks, stickers.
<code>mirzo-mark-reversed.svg</code> / <code>.png</code>	The seal alone on ink backgrounds.

File	Use
<code>mirzo-avatar.svg / .png</code>	1024 px round seal: WhatsApp, Telegram, LinkedIn, Instagram and other profile photos (they crop to a circle).
<code>mirzo-app-icon.svg / .png</code>	1024 px rounded-square icon: iOS, Android, Mac and Windows app icons.

Use the SVG wherever possible (web, Figma, Canva). The PNGs are high resolution with transparent backgrounds. The wordmark is outlined, so no font is needed.

The mark: the sound seal

Nine sound bars rise and fall to form a lowercase **m**, sealed inside a circle.

- **Sound:** Mirzo listens, so the mark is a voice waveform.
- **The m:** the two humps of the waveform spell Mirzo's initial.
- **The seal:** what Mirzo hears is sealed and stays private, like a scribe's sealed letter.
- **The saffron bar:** the one moment captured, in the valley of the m. It echoes the diamond dot in the wordmark.

Rules: – Always flat. No gradients, glows, shadows or outlines. – Nine bars, rounded ends, bottom-aligned; never add, remove, reorder or animate them out of the m shape in static use. – Only the middle bar is saffron. Never recolour it or add a second saffron bar. – In motion (app loaders, recording state), the bars may gently pulse, but they must settle back into the m.

The diamond dot

The dot on the i in the wordmark is a small saffron diamond: the shape a calligrapher's reed pen (qalam) leaves. It is Mirzo's signature detail and a quiet nod to the scribe. Never replace it with a round dot or recolour it.

Colours

Token	Hex	Use
ink	#1C2340	Wordmark, the seal, headlines, dark backgrounds, icon tiles
parchment	#F6F1E7	Default page background; bars inside the seal; wordmark on ink
saffron	#D9962B	The middle bar, the diamond dot and one accent per view. Never for text: too light on parchment or white.
white	#FFFFFF	Cards and inputs on parchment pages

The palette is deliberately warm and quiet, standing apart from the bright blues and purples of most AI notetakers.

Typography

- **Lora** SemiBold (600) for the wordmark (outlined in the files) and for headlines. A refined serif signals trust and craft.
- **Inter** 400/500/600 for body text, UI and data.
- Headlines in sentence case, calm and plain. No exclamation marks.

Size and spacing

- **Header height:** 40 px on desktop, 32 px on mobile.
- **Minimum size:** logo 120 px wide; wordmark 70 px; seal 24 px. At 16 px (favicons) the bars merge, which is acceptable; the seal still reads as Mirzo's dark circle.
- **Clear space:** keep empty space equal to a quarter of the seal's diameter on every side of the logo.

Voice

Quiet, precise, reassuring. Say what Mirzo does not do as clearly as what it does: no bot, no strangers in your meeting, no selling your data. Avoid hype words ("revolutionary", "magic") and avoid promising more privacy than the product actually delivers.

Don'ts

- Don't set the name in another font, in capitals ("MIRZO") or with a round i-dot.
- Don't take the bars out of the seal for the logo, or put the seal on a busy photo.
- Don't use saffron for text or large areas; it is the accent, used once.
- Don't place the light logo on dark backgrounds; use the reversed logo.
- Don't stretch, rotate, outline or add effects.
- Don't add robot, microphone or camera imagery next to the logo.
